affordable
solution

high performance real estate

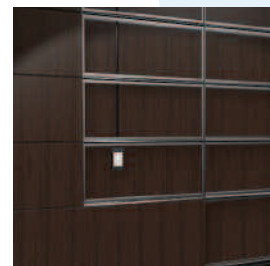

Today's corporate real estate executives are finding that real estate solutions need to be more "strategic" in nature. The limitations of standard construction do not fully meet an organization's key concerns for: technology, employee retention, flexibility, environmental, space utilization and productivity.

“ Our clients are making more strategic decisions with regard to their real estate needs. Environmental awareness and intelligent long term use of their space is driving many decisions. Modular Interior Construction lowers their operating costs, increases flexibility, improves their technology and is comparable in cost to standard construction. ”

Greg O'Brien, Principal—Sustainable Office
LEED Accredited Professional KDC
(Koll Development Company)

modular interior construction and its benefits

CWC, the Southeast's largest provider of workplace solutions is pleased to provide DIRTT movable wall systems. Strategic thinking businesses, looking to focus on changing their workspaces as their businesses evolve, find that DIRTT solves the challenges of construction, renovation, and demolition with its Agile Architectural Solutions!

- Flexible Reconfigurations
- Manages Technology
- Minimal Disruption and Downtime
- Positive Impact on Construction Schedule
- Environmentally Friendly
- Tax Benefits
- Design Appeal Features

it's better
on ICE®

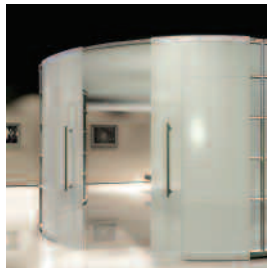

ICE® is DIRTT's revolutionary software for modular workspace design. It is an instant budget tool that shows different designs and finishes before any purchases are made. ICE is a Java-based tool that uses clear, graphic communication and an expert system. It allows designers and architects to choose colors, finishes, shapes, layouts, sizes and amounts, meanwhile behind the scenes the expert software stays on top of the product specifications, tallies up parts, pieces and prices, and even speaks directly to the manufacturer's tools.

“ The movable wall system we purchased has allowed us the ability to reconfigure our office space through several periods of rapid growth, and to ensure that our workflow processes are enhanced by the physical environment our associates work in.

The low profile floor system we installed provides modular power and data access through the floor, eliminating overhead power runs, and reducing our cost to reconfigure our voice and data systems by 60% per workstation. This has saved us over \$100,000 in the past five years...”

Michael Barker, Senior Vice President
Service and Operations Group, Private Business Inc.
